PROFESSIONAL SUMMARY

Frontend developer specializing in Next.js and React, focused on building fast, accessible, and well-structured user interfaces, with growing full-stack experience across auth, databases, and background job pipelines. Built the frontend for DigiPanch, a citizen-facing e-governance platform with an AI assistant; independently built Chartes, a full-stack social media marketing automation platform; and currently building hospital management interfaces at DAS Solutions.

EXPERIENCE

Frontend Developer Intern — DAS Solutions, Indore

Feb 2025 – Present

- Built the frontend for Neural Infirmary, a hospital bed management system, delivering real-time bed allocation, discharge workflows, and patient record views using Next.js (SSR/ISR) and AWS Amplify Gen 2 with DynamoDB.
- Developed an appointment-scheduling calendar and a TanStack Table data grid with sorting, filtering, and pagination, streamlining navigation of bed and patient records.
- Refactored data-fetching logic into three reusable custom hooks (useBeds, useBedFilter, useBedActions) to decouple business logic from UI components and simplify maintenance.

PROJECTS

Chartes — Social Media Marketing & Automation Platform | [chartes.tech](#)

Next.js, TypeScript, PostgreSQL, Prisma ORM, Redux Toolkit, Tailwind CSS, shadcn/ui, GSAP, Lenis, ImageKit

- Built a full-stack marketing automation platform end-to-end, including custom session-based authentication (bcrypt password hashing, cryptographically random session tokens, HTTP-only cookies) alongside Google and LinkedIn OAuth 2.0 / OIDC login.
- Designed the PostgreSQL schema with Prisma ORM (User, Account, Session, Post, PostPlatform models) to support multi-platform post drafting, scheduling, and publish-status tracking.
- Built the post composer with Redux Toolkit state management, end-to-end Zod validation, and signed direct-to-CDN media uploads via ImageKit.
- Implemented an automated publishing pipeline: a Vercel Cron worker dispatches scheduled posts to the LinkedIn REST API and cascades status to Published or Failed.
- Built the animated marketing landing page (Lenis smooth scroll, GSAP, Framer Motion) and a responsive automation dashboard with session-aware routing and connected-accounts management.

DigiPanch — AI-Powered Smart Panchayat Management System | [digipanch.live](#)

Next.js 16, React, TypeScript, Tailwind CSS, shadcn/ui, Clerk, ImageKit

- Built the frontend for a full-stack e-governance platform covering certificate applications, grievance tracking, document uploads, and online payments.
- Built role-based Citizen, Officer, and Admin dashboards with Clerk authentication.
- Built the chat interface for an AI assistant (Google Gemini) enabling citizens to ask questions about Panchayat services and government schemes.
- Integrated ImageKit-based document upload and preview flows on the client.
- Deployed the frontend on Vercel.

EDUCATION

Bachelor of Computer Applications (BCA)

2023 – 2026

NIELIT Agartala

TECHNICAL SKILLS

Frontend: Next.js, React.js, JavaScript, TypeScript, Tailwind CSS, HTML5, CSS3, Framer Motion, GSAP, shadcn/ui, TanStack Query/Table, Redux Toolkit, lucide-react

Backend & Data: Node.js, PostgreSQL, Prisma ORM, Zod, Custom Auth (bcrypt, OAuth 2.0/OIDC), Vercel Cron

Integrations: Google Gemini API, ImageKit, Google OAuth, LinkedIn API

Tools: Git/GitHub, Postman, VS Code, Vercel, Netlify, basic CI/CD
